## VELKOMIN

With this travel guide you will find all the information on available services and geosites in Reykjanes Peninsula in order to ease your journey and make it a memorable experience.

We hope that you will find it useful. We also recommend our website: [visitreykjan.es.is](http://visitreykjan.es.is) where you will find additional information about the Reykjanes Peninsula, upcoming events in the area and much, much more.

**We wish you an enjoyable stay in Reykjanes Peninsula.**

# WELCOME TO REYKJANES UNESCO GLOBAL GEOPARK

For most visitors to Iceland, Reykjanes Peninsula marks the beginning of an exciting adventure. As the coastline draws near and the plane prepares to land at Keflavík International Airport, the wrinkled lava, naked hills and mountains, yawning craters and spirals of geothermal steam in the virtually treeless environment stands out in vivid contrast to most travellers' memories of home.

Iceland is a natural paradise and Reykjanes is the first step of the journey into that wonderland; a region that beckons to be explored and enjoyed, with its own geological drama and unique personality that play out across the landscape. Reykjanes Peninsula is a UNESCO Global Geopark- a cultural, geographical, and historical treasure trove.

With this official travel guide we would like to introduce you to the wide variety of attractions, activities and accommodation offered throughout the Reykjanes region. For your convenience, the guide has colour-coded sections to help you quickly find the area you are interested in.

We will continue to update and improve the guide and your comments and observations are most welcome.

Please feel free to send us comments by email:

### REYKJANES TOURIST INFORMATION CENTRE

Located in the Duus Museum, the Reykjanes Tourist Information Centre can provide you with information on the local sites of Reykjanes peninsula, what to do and see and make your stay even more enjoyable. We offer assistance for planning your trip that suits your interests. We are glad to assist our guests and making your stay even better providing you with maps and information on anything from local activities to the weather. The Tourist Information Centre also houses the **Reykjanes UNESCO Global Geopark** Visitors' Centre with an exhibition on the geology of the Reykjanes peninsula and where you can get the certificate for crossing the symbolic Bridge Between Continents.

📍 Duusgata 2-8,  
230 Reykjanesbær

### REYKJANES GEOPARK VISITOR CENTRE

The Reykjanes Geopark Visitors' Centre is located in Duus museum, Reykjanesbær. It serves as a regional tourist information where travellers can get general information about Reykjanes peninsula, Iceland and general information on traveling in Iceland. The Visitors' Centre has an exhibition on the geology of the Reykjanes peninsula and its unique geology. It's a great place to get information about what you are seeing and experiencing when travelling in Reykjanes.

#Reykjanes

## 1. REYKJANESBÆR

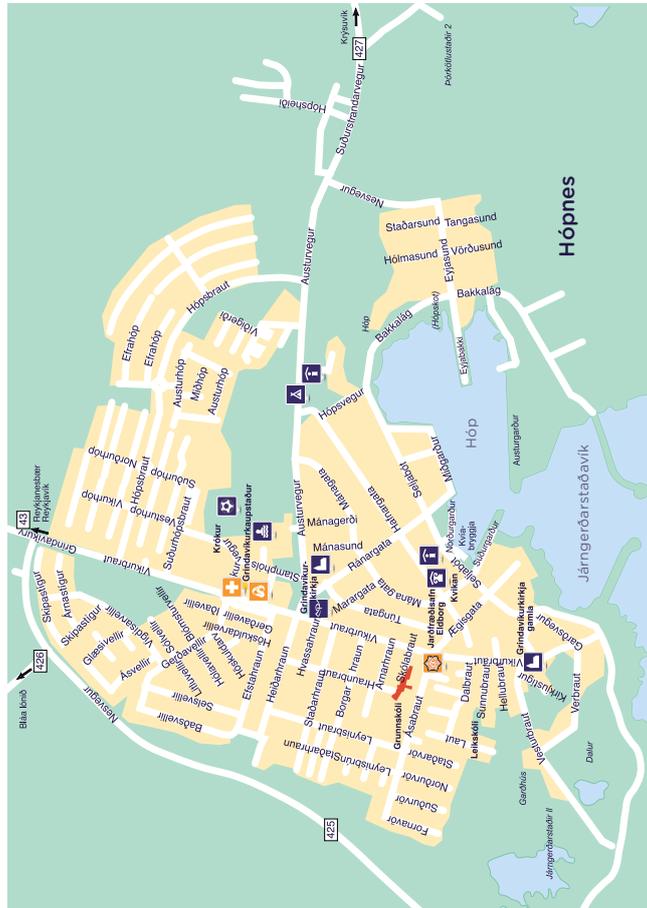

Reykjanesbær is the town closest to the international airport, only a short drive away. Reykjanesbær is made up of 4 main districts, Keflavik, Njarðvik, Ásbrú and Hafnir. The town offers a great variety of options for guests travelling in Iceland. Within minutes from the international airport you will find all types of accommodations, restaurants, bars, shopping, museums and other attractions.

Reykjanes peninsula is one of Iceland's most geologically diverse area in Iceland and Reykjanesbær is there for a great option for guests exploring the region with great connections to everything from natural wonders, the Bridge Between Continents, south shore to the Golden Circle.

-  [reykjanesbaer.is](https://www.reykjanesbaer.is)
-  [visitkeflavik.is](https://www.visitkeflavik.is)

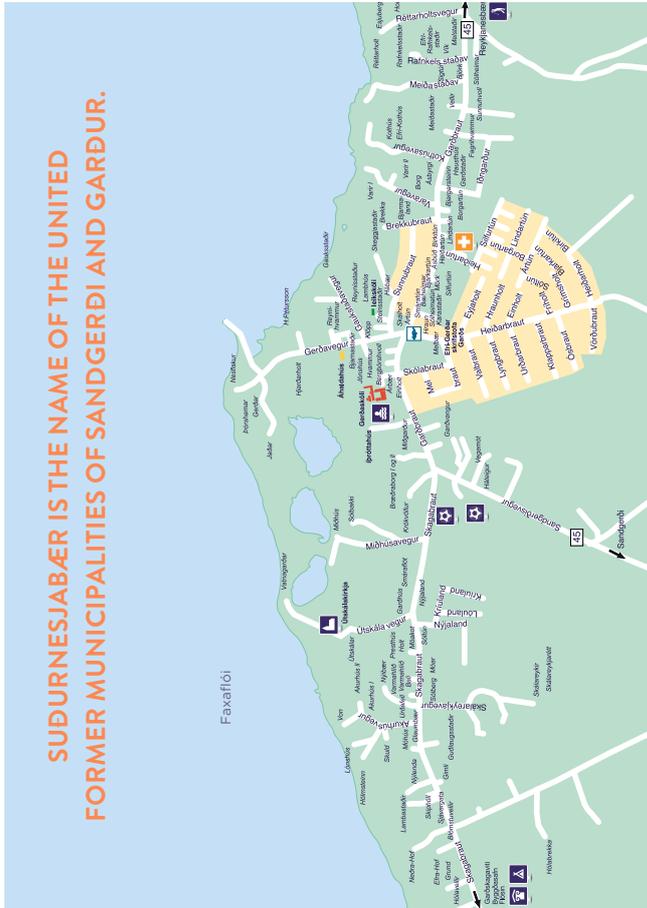

## 2. GRINDAVÍK

Not only does the village of Grindavík have the honour of being home to the world famous Blue Lagoon, but the inhabitants are the happiest in Iceland according to a recent study. The small community offers visitors a surprising selection of possibilities for recreation, leisure activities and fun for the whole family. Marked hiking trails that wind their way across the moon-like landscape, a modern campground and swimming facilities and one of Iceland's best golf courses are just a few of the many amenities found here.

For culture there is Kvikinn - House of Culture and Natural Resources and for dining out there are several good restaurants that cater to all budgets and tastes.

-  [visitgrindavik.is](http://visitgrindavik.is)
-  [grindavik.is](http://grindavik.is)

SUDURNESJABÆR IS THE NAME OF THE UNITED FORMER MUNICIPALITIES OF SANDGERÐI AND GARÐUR.

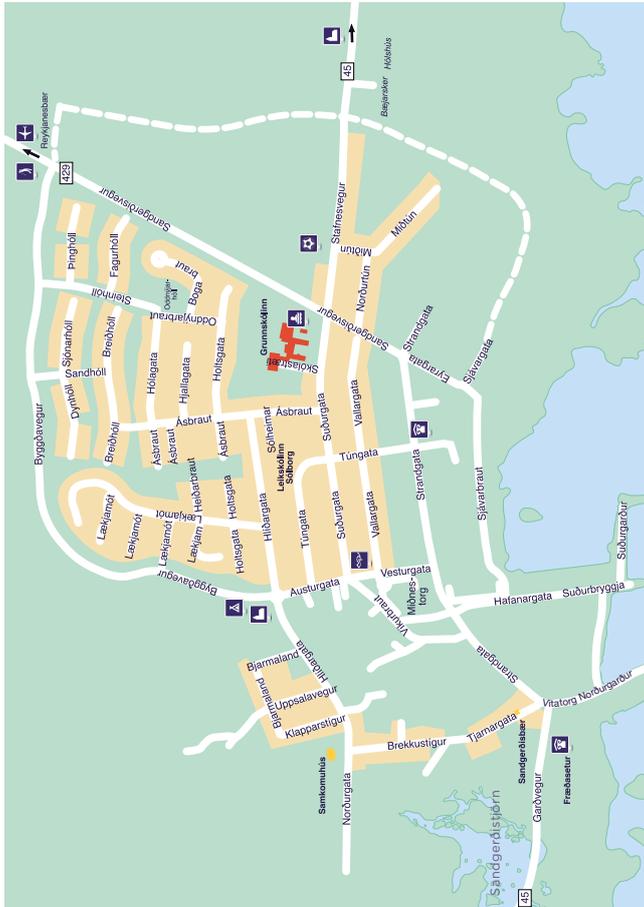

### 3. SUDURNESJABÆR – GARÐUR

Outdoor enthusiasts should not miss the chance to visit the town of Garður as they travel around Reykjanes Peninsula. Located in proximity to prime fishing grounds, Garður was once the most populated village on the peninsula. Nearby Garðskagi, at the very tip of the peninsula, provides magnificent sea views and two picturesque lighthouses. The area is known for its diverse birdlife, seals and dolphins that sometimes swim near the shore, white sand beaches and an interesting heritage museum with a collection of old machines on display. Garður is the hometown of the lead singer of the popular indie band Of Monsters and Men.

Local restaurant Röstin is very popular and the view from its balcony is beautiful, especially at sunset. Ideal for guests with tents, trailers and motorhomes, facilities at the local campsite include toilets, running water and electricity. Take a dip at the local swimming pool and relax in the hot tubs- a perfect way to end a busy day of sightseeing.

-  [sudurnesjabaer.is](http://sudurnesjabaer.is)
-  [gardur.is](http://gardur.is)

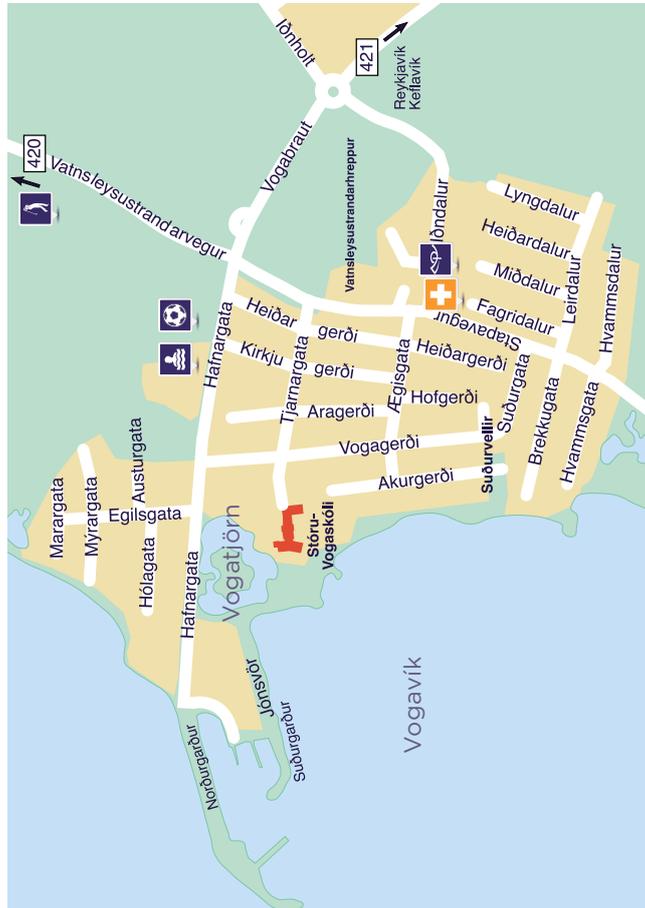

#### 4. SUÐURNESJABÆR – SANDGERÐI

Sandgerði is one of Iceland's major fishing communities and is located on the very northern tip of the peninsula. There are interesting things to do in the town, including birdwatching and golfing. A large variety of handmade souvenirs are on offer at the Listatorg souvenir shop and one can also take in the nature and research exhibits at the Suðurnes Science and Learning Center.

It is possible to rent a quiet summer house on the north side of town and a campsite with all the necessary facilities recently opened. A newly constructed road takes you right around the coastline, passing Hvalsnes church, Stafnes village and onwards to Hafnir village.

-  [visitsandgerdi.is](http://visitsandgerdi.is)
-  [sudurnesjabaer.is](http://sudurnesjabaer.is)
-  [sandgerdi.is](http://sandgerdi.is)

## 5. VOGAR

The landscape shaping the municipality of Vogar is mainly lava fields that stretch all the way from the mountains, going right down to the coast. In spite of the abundance of lava, Vogar remains the largest agricultural area on the peninsula. The town is an old fishing village in a charming environment ideal for walking. Here you can walk along the shore, do some birdwatching along the coastline or by Vogatjörn pond, visit the old harbour and admire the Íslands Hrafnistumenn monument, in memory of local fishermen.

At Kálfatjörn you will find an excellent nine hole golf course that encircles one of the largest timber churches in Iceland. There are several interesting landmarks in the district, including Mount Keilir, Háibjalli, Snorrastaðatjarnir, Hrafnagjá and Staðarborg, all listed as geosites in Reykjanes UNESCO Global Geopark.

# REYKJANES UNESCO GLOBAL GEOPARK

Reykjanes UNESCO Global Geopark covers the Reykjanes Peninsula, a singularly unique geological site where the Mid-Atlantic Ridge rises above sea level. Nowhere else in the world can you see the oceanic ridge and its divergent plate boundary, as clearly as in Reykjanes. Although the peninsula's barren landscapes have been likened to that of the moon, it's certain that this extraordinary landscape sets fire to the imagination. Fuelling this fire is the pillow lava, those curious rock formations that step onto the stage of folklore in the shape of elves, trolls and outlaws.

## WHAT IS A UNESCO GLOBAL GEOPARK?

UNESCO Global Geoparks are single, unified geographical areas where sites and landscapes of international geological significance are managed with a holistic concept of protection, education and sustainable development.

A UNESCO Global Geopark uses its geological heritage, in connection with all other aspects of the area's natural and cultural heritage, to enhance awareness and understanding of key issues facing society, such as using our Earth's resources sustainably, mitigating the effects of climate change and reducing the impact of natural disasters. By raising awareness of the importance of the area's geological heritage in history and society today, UNESCO Global Geoparks give local people a sense of pride in their region and strengthen their identification with the area. The creation of innovative local enterprises, new jobs and high quality training courses is stimulated as new sources of revenue are generated through geo-tourism, while the geological resources of the area are protected.

## GEOLOGY

Reykjanes Peninsula is an important region from a geological standpoint. It is a geologically young section of Iceland and is a land born and highly volcanic counterpart of the North Atlantic Ridge where the tectonic plates diverge at an average rate of 2.5 cm/yr. The peninsula contains late Quaternary volcanic palagonite tuff and pillow lava formations as fells and mountains from the last glacial periods. Widespread basaltic lava flows and volcanic structures from interglacial periods, especially from the last 11,500 years (the Holocene Era) characterize the area. Four elongated volcanic systems and fissure swarms line the peninsula from SW to NE. They contain open fissures, normal faults, high temperature geothermal fields and numerous volcanic fissures that are lined with monogenetic craters. Many small and large lava shields can be found here, some made of primitive mantle melt (picrite). Eruptions have occurred in the three westernmost systems during the past millennium, all in all three series, in the 10th and 11th centuries, in 1151-1180 and 1210-1240.

## ENJOY HIKING IN REYKJANES

Reykjanes Peninsula is a unique place on earth where the Mid-Atlantic Ridge, an ocean ridge stretching 15,000 km down the middle of the Atlantic Ocean surfaces. The ridge separates two tectonic plates, the Eurasian and the North American, resulting in volcanic eruptions, geothermal activity, fissures, faults and earthquakes which are common on plate boundaries. The plates are drifting apart by an average of 2 cm a year.

### BRENNISTEINSFJÖLL

There are many hiking trails that crisscross this remarkable area and hikers are expected to follow a few simple rules of conduct when hiking on the trails.

- Keep to the trail.
- Do not break any natural formations or damage them in any other manner.
- Refrain from disturbing vegetation as much as possible.
- Do not litter – throw any trash you may have into a garbage bin.
- There are no lavatories along the paths. Please conclude your needs at the nearest lavatories prior to your hike.
- Show due consideration if you should need to relieve yourself on the way.
- There is no water to be found along the trails. Be prepared.

## RESPONSIBLE TOURISM

It takes many decades for moss to grow and form a thick layer over volcanic surfaces, but only takes seconds to be destroyed. Damage caused by footprints and tire marks can take years or even decades to heal.

Overnight stays in vehicles or tents outside of designated campsites are prohibited in Reykjanes UNESCO Global Geopark. There are four good camping grounds on the peninsula and they can all be reached within an hour. See list of campsites on page 108 in this book and visitreykjanes.is for detailed information.

Please don't litter. Take all litter out with you, including biodegradable foods. If you happen to come across litter left by others, please help us by disposing of it carefully. You are requested to report any large quantities of litter that you come across to the Geopark office.

There are many landowners throughout Reykjanes UNESCO Global Geopark. Please respect their property and livestock.

Enjoy your stay in Reykjanes UNESCO Global Geopark in a responsible and sustainable way.

 [reykjanesgeopark.is](http://reykjanesgeopark.is)

### SPÁKONUVATN

## GEOSITES - POINTS OF INTEREST

**1 ARNARSETUR**

A monogenetic volcanic fissure (2 km) with scoria and spatter craters, rugged lava formations (20 sq. km), lava tubes and remains of human activities. The eruption was an integral part of Reykjanes Fires, a volcano-tectonic episode in 1210-1240.

**2 BRENNISTEINSFJÖLL**

A large cluster of late Ice Age hyaloclastite mountains, including a prominent lava shield (Kistufell), lined with Holocene but prehistoric volcanic fissures. A high-temperature area is located in the northern part, where sulphur was mined around 1880.

**3 DJÚPAVATN/SPÁKONUVATN/ARNARVATN**

Three lakes in the hyaloclastite Ice Age ridges Vesturháls and Sveifluháls, containing groundwater. Djúpvatn is partly a crater lake, close to Djúpvatnsleið road, Spákonuvatn crater lake to the Sog-geosite and Arnarvatn to a marked path across Sveifluháls.

**4 ELDBORG NEXT TO HÖSKULDARVELLIR**

The grassy field, Höskuldarvellir northwest of Grænadyngja and Trölladyngja is bordered in the northeast by a large, prehistoric monogenetic scoria and spatter cone. It has been utilized as a gravel mine, thus damaged. Steam vents line the surroundings.

**5 ELDBORG NEXT TO GEITAHLÍÐ**

A prehistoric, volcanic fissure cuts into the slopes of Geitafell, a hyaloclastite table mountain. Out of five craters, made of scoria but chiefly of spatter, one is by far the highest, with a prominent lava channel branching off to the east.

**6 ELDVÖRP**

A 10-km-long row of scoria and spatter cones in off-set (en echelon) sections, with centrally placed geothermal features and a borehole. It dates from a volcano-tectonic episode in 1210- 1240 (Reykjanes Fires). The lava flow covers 20 sq. km, with remains of human activities.

### 7 GRÆNADYNGJA/TRÖLLADYNGJA

Steep hyaloclastite mountains west of Sog - geosite. Geothermal sites and younger volcanic fissures border them, associated with various lava flows, including Afstapahraun (aa type) close to the Keflavik Int. Airport main road.

### 8 HAFNABERG

A long line of sheer sea lava cliffs south of the old fishing hamlet of Hafnir. Various marine birds nest at the cliffs. A walk to Hafnaberg is popular among hikers and bird watchers, along a marked path from the road to Reykjanes.

### 9 HÁLEYJARBUNGA

A small, flat lava shield with a large, 20 to 25-m-deep crater. At least 9,000 years old, it was formed during a highly effusive lava eruption. The basalt-type is a primitive deep-mantle derived picrite that contains much of the green mineral olivine.

**10 HRAFNAGJÁ**

The normal fault and tension fracture, Hrafnagjá, is the longest of its kind at the Reykjanes Peninsula, 12 km long and up to 30m high. Visible from the road to Keflavík Int. Airport, a set of fractures east of Vogar village forms a typical rift valley.

**11 HRÓLFSVÍK**

A small inlet, known as a locality for xenoliths (gabbroic crystal aggregates related to the host magma), embedded in an old lava flow of uncertain age and origin.

**12 HRÚTAGJÁRDYNGJA**

A lava shield, 6,000 to 6,500 years old, plus a lava flow, 80-100 sq. km, has a volume of at least 3 cu. km. Besides a large top carter, the upper part is cut by deep ravines, probably due to magma injections, causing the whole structure to inflate.

**13 HVASSAHRAUNKATLAR**

Hornitos in the Hrótagjá lava shield flow. Hornitos usually form due to powerful degassing at crater edges. These ones however, came into being approx. 10 km away from the top crater.

**14 KATLAHRAUN**

Lava that flowed about 2,000 years ago entered the sea. Sudden damming at the shore caused a large, circular lava pond to form. Some lava solidified, but the remaining liquid escaped. The site now contains various lava formations.

**15 KERLINGARBÁS**

Seaside remains of three large tephra rings, 800 to 2,000 years old, topped by lava flows. The uppermost one originated at the Younger Stampar crater row during the Reykjanes Fires, like the youngest tephra layers. Dykes cut through the tephra banks.

**16 LAMBAFELLSGJÁ**

Lambafell probably stems from the second last glacial period. Tensional fractures cut through it. One opens up in the north to from Lambafellsgjá, 150 m long, 50 m deep but only 3 to 6 m wide, with pillow lava walls. Visitors can enter and exit. Please be alert and be careful of the delicate nature/landscape.

**17 MÉLTUNNUKLIF**

A stack of bedrock layers including lava flows, palagonite tuff, tillites, interbeds and erosion planes. Méltunnuklif contains several pages of geological history that illustrates key bedrock of formations of the Reykjanes peninsula.

19

**18 ROSMHVALANES**

A large flat area that represents the oldest part of the Reykjanes peninsula. The topmost bedrock is heavily eroded lava shield basalt, dating from the last (Eem) and second last warm Ice Age period (Saalian), around 120,000 and 240,000 years old.

**19 SANDFELLSHÆÐ**

One of the largest lava shields of the Reykjanes peninsula. The lava flow area exceeds 100 sq. km. The crater is large but shallow. The eruption occurred about 14,000 years ago, when sea level was some 30 m lower than today.

**20 SKÁLAFELL**

A volcano formed in a few eruptions, 3,000 to 8,000 years ago. The top crater is a handsome scoria and spatter cone. Large normal faults close by mark the eastern borders of Reykjanes Volcanic System and the Southwestern volcanic rift zone.

### 21 SOG

A set of fluvial gullies and prows to the southwest of Trölladyngja. The area is colourful due to intense high-temperature alteration of the bedrock and a number of steam vents, small hot water springs and bubbling mud pools.

### 22 STAMPAR

Two parallel volcanic fissures on Reykjanes. Both are lined with numerous craters. The older row is 1,800 to 2,000 years old. The younger one dates from the volcano-tectonic Reykjanes Fires in 1210–1240, plus a 4.6 sq. km lava flow.

22

### 23 SUNDHNÚKSRÖÐ

A monogenetic crater row formed about 2,300 years ago. The lava flow entered the sea (where the town of Grindavík is today) and created a low-rise, rocky seashore with a lagoon where the present harbour was step-wise designed.

### 24 SVEIFLUHÁLS

One of the largest multi-summit hyaloclastite ridges in the Geopark. It is interesting for its variety of hyaloclastite formations; layered tuff, breccia and pillow lava. The rocks bear witness to interaction between magma, glacier ice and water.

### 25 ÞRÁINSSKJÖLDUR

A very large, flat lava shield, visible from the road to the Keflavik Int. Airport. The road cuts through its vast lava flow. It is of the pahoehoe lava-type, at least 130 sq. km (5,2 cu km) and dates about 14,000 years back.

23

### 26 ÖGMUNDARHRAUN

A lava flow from 1151, formed during the volcano-tectonic Krýsuvík Fires (1151-1180). A tale of the berserker Ögmundur relates how he constructed a track through the lava flow. The discontinuous volcanic fissure stretches some 25 km to the northeast.

### 27 BRIMKETILL

A small, naturally carved pool, by marine erosion, at the lava shore edge west of the town of Grindavík. The folklore relates that the pond was regularly occupied by a giantess named Oddný. Please note that the waves can be unpredictable and powerful and you should not swim in the pool.

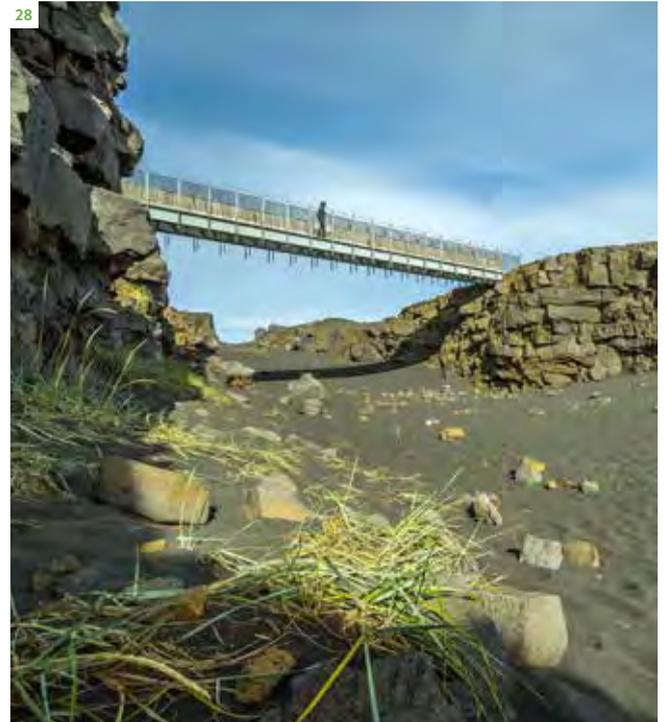

27

### 28 THE BRIDGE BETWEEN CONTINENTS

A symbolic footbridge, The Bridge Between Continents spans a wide tension crack that opened up due to the divergent movements of the North American and Eurasian plates. The average rifting amounts to about 2 cm/year but commences in bursts.

28

**29 ELDEY**

A 77-m-high island, of unknown age, made of layered palagonite tuff on top of the Reykjanes ridge, 15 km offshore, from a tephra eruption on this section of the Mid-Atlantic Ridge. The area is 0.3 sq. km, large enough for up to 18,000 gannet pairs to nest.

**30 GUNNUHVER**

A group of vigorous mud pools and steam vents at Reykjanes. They change with time. The group partly formed after earthquakes in 1967. The name stems from a story about the vicious ghost Gunna who was lured into a vent and never seen again.

**31 FESTARFJALL/HRAUNSVÍK**

A hyaloclastite mountain formed during a subglacial eruption, possibly during the Weichselian glaciation. Marine erosion has opened up a cross section of palagonite tuff, breccia, pillow lava and a feeder dyke; a silver necklace belonging to a giantess.

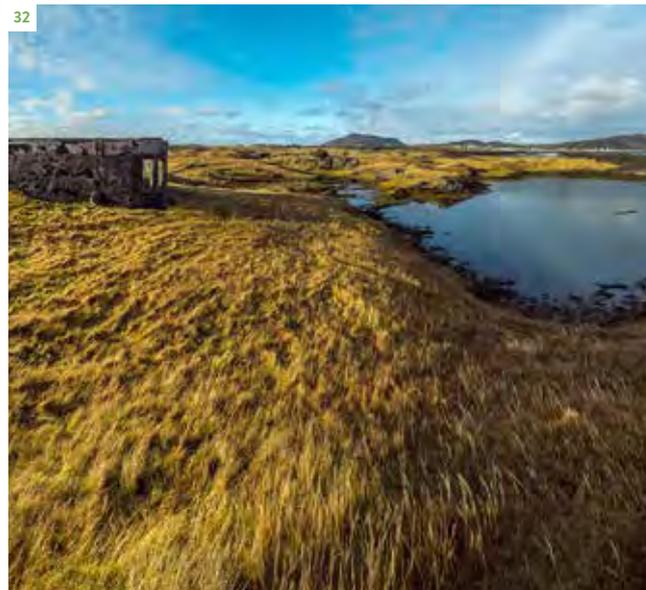

**32 HÓPSNES**

A spit next to the town of Grindavík. It was formed during an eruption from a row of craters north of the town (Sundhnúksröðin). Port conditions are good as a result of the lava entering the sea.

**33 HÚSHÓLMI**

A clearing (kipuka) over which the lava Ögmundarhraun didn't flow during an eruption in 1151, with remains of farm buildings and a church, plus turf and rock walls. Some farm buildings and much of the farmland was destroyed.

**34 KEILIR/KEILISBÖRN**

A cone-shaped hyaloclastite mountain attached to a low ridge (Keilisbörn). The formation stems from an eruption beneath an Ice Age glacier. Keilir is an icon for the Reykjanes Peninsula due to its distinct shape, and an old navigation mark.

**35 KLEIFARVATN**

The largest lake on the peninsula, 9.1 sq. km and 97 m deep, in a depression between the Brennisteinsfjöll massif and the ridge Sveifluháls. It has minor surface inflow and only ground-water outflow. Folklore depicts a large Nessie-like black worm in the lake.

**36 REMAINS OF HUMAN ACTIVITIES IN ELDVÖRP**

Remains of human activities in the Eldvörp lava flow; three paths represent old trading and communication routes and ruins of numerous small huts, built of lava pieces, are of unknown age and purpose. Outlaws? No, not likely.

**37 ÓSAR**

A rocky inlet adjacent to the old hamlet of Hafnir with its newly excavated pre-settlement ruins of a Norse (or Celtic) outpost. Ósar is an important, protected site due to the blooming birdlife and interesting marine biology.

**38 PATTERSONFLUGVÖLLUR**

The Patterson-airstrip was built on consolidated marine sediments with subfossil marine molluscs. The most common species is blunt gaper (*Mya truncata*), 20,000 to 22,000 years old, from a period before the Weichselian Late Glacial Maximum.

**39 SELATANGAR**

Low-rise seashore lava spits with ruins of a seasonal fishing station (for open rowing boats). The fishermen's huts and sheds for drying or storing fish were constructed from lava rocks. The station operated from the Middle Ages until 1884.

**40 SNORRATAÐATJARNIR/HÁIBJALLI**

Háibjalli is a 10 m high normal fault next to the ponds of Snorra-  
staðatjarnir. The location is rich in vegetation and an important  
resting place for migrating birds as well as a popular recreational  
zone.

40

**41 SOGASEL**

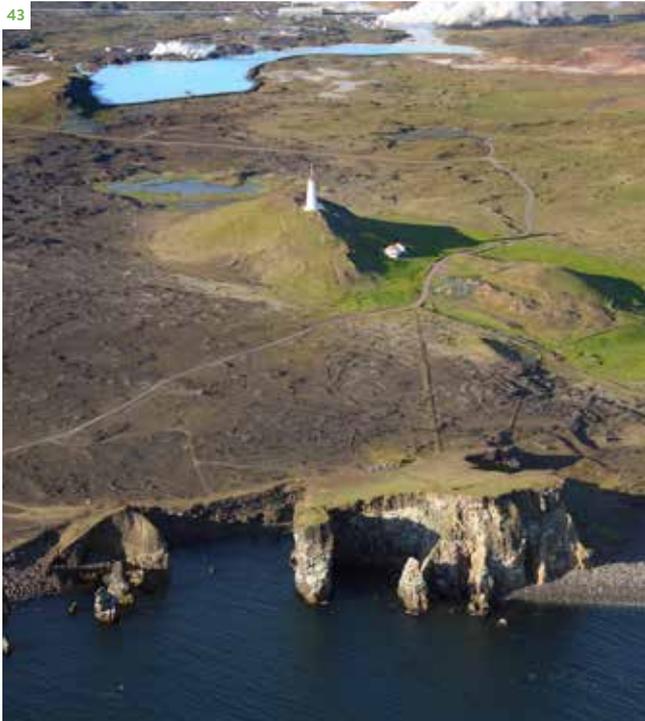

Ruins of a shieling (a hut used during the pasture period for  
the sheep) close to Grænadyngja and Sog. The shieling is  
unique because it is constructed in a large scoria crater.

**42 SVARTSENGI**

One of the major geothermal areas of the Reykjanes Peninsula.  
It supplies communities with hot water as well as electricity  
to the national grid. Effluent water creates the Blue Lagoon.  
The Resource Park is a prime example of geothermal energy  
utilization.

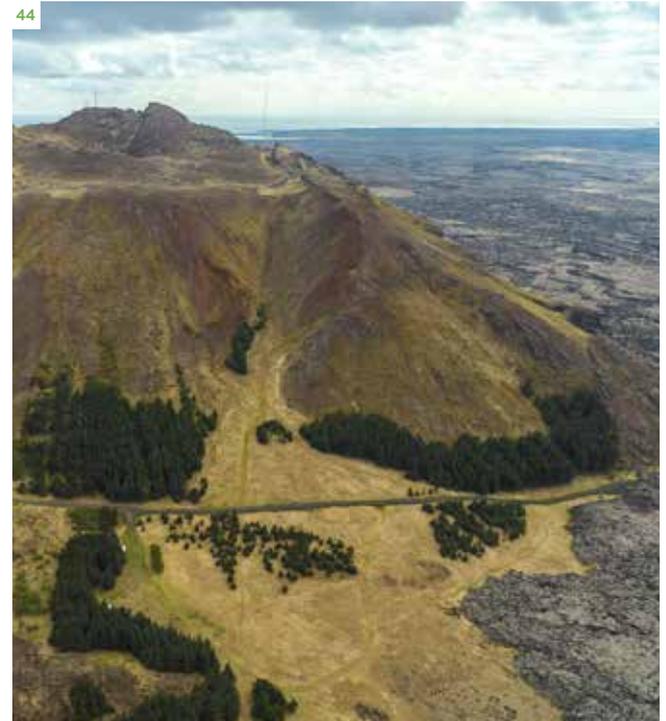

**43 VALAHNÚKUR/VALABJARGARGJÁ/VALAHNÚKSMÖL**

The shoreline at Reykjanes where the Mid-Atlantic Ridge connects to Iceland. Valabjargargjá is the normal fault to the east and Valahnúkur an eroded hill (palagonite tuff, pillow lava and breccia). Valahnúkamöl is a beach berm, made of large boulders.

**44 ÞORBJARNARFELL**

A free-standing, hyaloclastite mountain north of Grindavík. It is split by fault lines that create a shallow valley (graben). A part is called The Thieves' Gap" (Þjófagjá), occupied by 15 thieves according to the legend.

**45 BÁSENDAR**

In 1799, a powerful storm, combined with high spring tides produced the worst known flood in the southwest: Básendaflóð, named after a small trading post and fishing harbour. The shoreline changed and buildings were destroyed

**46 DRYKKJARSTEINN**

A large rock at the old track between Krýsuvík and Grindavík, The Rock of Drinks. It has three holes, one to hold water for dogs, another for humans and the third for horses. There, travellers were to trust that they could find drinking water.

**47 GARÐSKAGAVITI**

Garðskagi Point is probably the most dangerous costal area for seafarers around Iceland. Hence the two lighthouses next to each other, built in 1897 and 1944. Prior to the old lighthouse, a large cairn was erected, and a lamp added in 1884. Still, despite the lighthouses, about 40 ships stranded around Garðskagi Point in the 20th century.

**48 GÁLGAKLETTAR**

High hyaloclastite cliffs form the summit of Mt. Þorbjarnarfell close to Grindavík town. Thieves captured in the area were executed at Gallows Cliffs, according to an old folktale.

**49 HVALSNESKIRKJA**

A beautifully preserved church and graveyard from 1887. The building is built with basalt lava blocks, retrieved from the neighborhood, and the interior partly crafted from driftwood. A similar church is in Njarðvík.

52

### 50 REYKJANESVITI

The Reykjanes lighthouse is the oldest lighthouse currently operated in Iceland, from 1908. A lighthouse keeper and farmer used to live next to the lighthouse but now the operation is remotely controlled.

### 51 SKAGAGARÐURINN

Remains of a wall from the time of the settlement (870-1000). The town of Garður and Garðskagi peninsula are named after this wall. The wall served to separate livestock from fields and crops. The wall was tall, built of turf and rocks, but has subsided and large sections have vanished.

### 52 STADARBORG

An isolated sheep shelter. It is rounded but without a roof, over 2 m high, 8 m in diameter, and 35 m in circumference, skillfully made of flat lava rocks. The age is unknown but considered a few hundred years.

### 53 VIGDÍSARVELLIR

A wide, open grassy field at the foot of hyaloclastite ridges. Remains of two small farms illustrate an old way of life in remote highland farms. The younger farm was abandoned after a strong earthquake in 1905.

### 54 VOGUR IN HAFNIR

Remains of the oldest occupation on the peninsula, possibly dating back to the first travels to the island when Nordic people were expanding their explorations. It is possible that the ruins, a longhouse (skáli) and smaller constructions, constitute an explorer's outpost like Nordic buildings in Newfoundland.

### 55 ÞÓRSHÖFN

One of the main German trading posts in Iceland during the 15th and 16th centuries. During the 19th century, ships started frequenting the harbour again but it was gradually abandoned, as the Sandgerði harbour was improved.

55

## WHAT TO SEE IN REYKJANES UNESCO GLOBAL GEOPARK

### BIRDLIFE

Birdwatchers won't have to go far for good birdwatching spots. Just like nature, whose best and most rare plumage can be seen in Reykjanes, rarer bird species are more often spotted here than elsewhere in the country. The peninsula serves as a perfect breeding place both for birds preferring low coastal region as well as cliff breeding.

Some great birdwatching sites include Fitjar, shore of Garðskagi and Sandgerði. Get the Reykjanes Geopark birdwatching map at the Reykjanes **Geopark visitor Center**, Duusgata 2-8, 230 Reykjanesbær.

### WHALES

The ocean surrounding the Reykjanes Peninsula is an important habitat for marine mammals like whales and dolphins, mainly as a seasonal feeding ground, rich in plankton. These waters provide excellent conditions for such fish species such as sand eel, herring, capelin, haddock and cod to thrive. Check out the Reykjanes whale watching opportunities in the "Activities" section of this book.

### SOIL AND VEGETATION

Moss heath is the most common plant community on the Reykjanes Peninsula and covers nearly all the vegetal lava fields in the area. Rainwater easily seeps through the soil and continues further into the porous lava or bedrock below and deep into the ground. Often the plants cannot utilize the water before it runs into the ground. Today, the hills and mountains in the region are more or less bare due to soil erosion.

### RICH FISHING TRADITION

Reykjanes is one of the primary locations for the fishing industry in Iceland. In former times, a large part of the population would travel out to the peninsula to buy fish for their families.

On the peninsula, you will find several sites where local fishermen would push their boats out to sea and then drag them back ashore, full of fish. Be sure to sample the fresh seafood, which is caught in the unpolluted waters of the North Atlantic and delivered daily from the dock.

### THE SETTLEMENT OF REYKJANES

The Settlement of Reykjanes Peninsula is generally believed to have begun in the second half of the 9th century, when Norsemen migrated across the North Atlantic. Ingólfur Arnarson, the first settler, claimed all the land which is now called the Reykjanes Peninsula. He then allocated land to five men and a woman named Steinunn the Aged. She repaid him with a knitted coat.

### VOGUR IN HAFNIR: FARMHOUSE OR OUTPOST?

In the village of Hafnir there is an interesting archaeological excavation where archaeologists found ruins of a longhouse or "skáli". Is it possible that the ruins are not those of an ancient farmhouse?

Was this instead the outpost of explorers and adventurers, like the buildings of Norsemen in Newfoundland? Items found during the excavation in Hafnir are on display in Viking World and Duus Museum in Reykjanesbær.

### THE FORMER NATO BASE

From the Second World War, the North Atlantic Treaty Organization or NATO had facilities at the Keflavik International Airport. The base was known as Naval Air Station Keflavik or NASKEF. In September 2006, the US military evacuated the base and the Icelandic authorities were given full command over the area. Today this is a residential area (Ásbrú), with schools for children, a university and a campus, along with other services and industries.

### LIGHTHOUSES

Because the waters around Reykjanes Peninsula have always been prolific fishing grounds, you will find many lighthouses guiding the way for seafarers with reasonably short distances between them. It's fun to visit all of them but if you are short on time, try not to miss the following gems:

#### REYKJANES LIGHTHOUSE

The first lighthouse in Iceland was built on Valahnúkur on Reykjanes in 1878. By 1905 earthquakes and surf had damaged Valahnúkur to the extent that there was a risk of the lighthouse falling into the sea. A new lighthouse was therefore built in 1907-1908 on Bæjarfell hill in Reykjanes.

#### THE LIGHTHOUSES AT GARÐSKAGI

The lighthouses in Garðskagi were constructed 1897 in 1944.

The spectacular seascapes at Garðskagi are a highlight, as is the abundant birdlife that migrates to the area every spring. The old lighthouse is often an inspiration to both artists and photographers and is open to visitors by request. The new lighthouse is the biggest in the country. It houses interesting Northern Lights and Whale shows and has great view from the top. A visit to the lighthouse is included in the museum fee.

### CHURCHES

There are more churches in the Reykjanes Peninsula than there are towns. Each of them is quite unique. Here are five you should put on your must-see list.

#### INNRI-NJARÐVÍK

The church in Innri-Njarðvík was consecrated in 1886 and is made from carved rock which was brought from the shore nearby and the heath above the inhabited area. One of the three bells in the church tower is an ancient bell made in 1725.

#### HVALSNES

The church at Hvalsnes was consecrated in 1887. The building of the church was financed by a farmer and a shipowner who owned the land at Hvalsnes. The church was built with basaltic lava stones and the wood was collected from the shores nearby. Hallgrímur Pétursson, Iceland's most important psalmist, served as a priest at the parish in Hvalsnes in the 17th century.

#### KÁLFATJÖRN

Kálfatjörn is a former farm, parsonage and a church site in the town of Vogar. During catholic times, the church was dedicated to St. Peter. The present church was built in 1891 and is Iceland's largest rural church. The altarpiece, a replica of the one in the Reykjavík Cathedral, painted by Sigurður Guðmundsson, is equally old as the church.

#### ÚTSKÁLAR

The church was consecrated in 1863. The interior of the church was painted and decorated by Áki Gränz, a master painter. The church is preserved and has a modern tower design. It is made from wood.

#### KIRKJUVOGUR

Kirkjuvogur (Church Cove) was a mansion in Hafnir, an annexed church site of the Grindavík parish, which was long served by the reverends of Útskálar. Still earlier, Kirkjuvogur was served from Hvalsnes. The catholic churches were dedicated to the Holy Mother. During the flood storm of 1799, the church was severely damaged.

### HIKING IN REYKJANES PENINSULA!

Hiking some of the less travelled walking routes in Iceland and getting fresh air into your lungs is an activity worth exploring, with a guide or on your own. Please stay safe and keep to the paths.

### NETWORK OF ANCIENT WALKING ROUTES

The combined length of the 25 main hiking routes on the Reykjanes Peninsula is about 242 km. Reykjanes Peninsula is envied for its plethora of hiking trails that crisscross the region. The trails are often ancient roads from the time when Icelanders travelled on foot or by horseback. The geology and nature of the area will certainly open up for you during these walks through the peninsula's extensive lava fields, marked by caves and colourful, outlandish formations. Hiking maps can be found at all information centres.

### THE COASTAL HIKING TRAIL IN REYKJANESBÆR

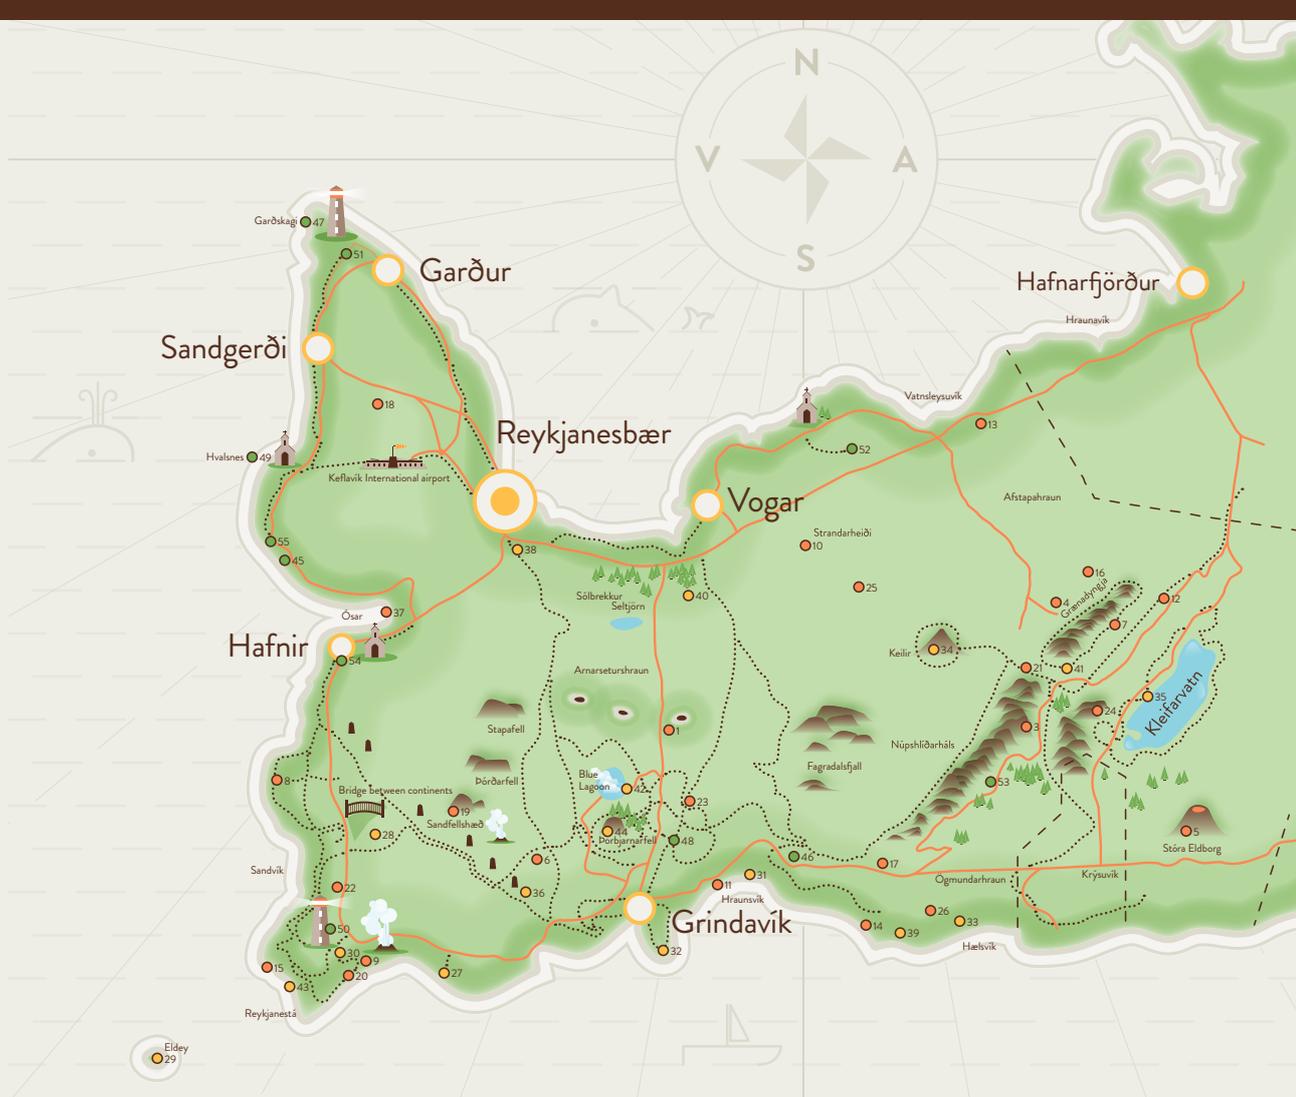

10 km long coastal hiking/walking trail lies from the marina in Gróf up to the Stapi cliffs in Innri-Njarðvík. The smooth surface of the paved path provides an easy route where you can enjoy the fresh sea air, colourful seabirds, a variety of coastal vegetation and the geology of the surrounding terrain.

### GRINDAVÍK – THE BLUE LAGOON

Now it is possible to walk, jog or cycle from the town of Grindavík to the Blue Lagoon. A new paved path gives you the opportunity to enjoy the beautiful moss covered lava fields characteristic of this part of the peninsula.

### 1. DUUS MUSEUM – CULTURAL CENTER

Duus Museum is a cluster of old buildings by the marina in Keflavik and are among Iceland's most remarkable and historic man-made structures. Busy centers of commerce throughout their existence, their last role before their conversion was as a fish processing plant. With the oldest timber building completed in 1877 and the youngest concrete structure finished in 1954, together they span almost a century of Icelandic architectural history. Today, the complex includes eight exhibition halls, which houses the Reykjanes Art Museum, the Reykjanes Maritime Center, the Old Cinema Hall, the Reykjanes Heritage Museum, the Reykjanes Geopark visitor center and the Reykjanes tourist information center.

-  Duusgata 2-8, 230 Reykjanesbær
-  Open Every day 12:00 - 17:00
-  Access
-  +354 420 3245

-  [duushus@reykjanesbaer.is](mailto:duushus@reykjanesbaer.is)
-  [duusmuseum.is](http://duusmuseum.is)

## 2. REYKJANES GEOPARK VISITOR CENTER

The Reykjanes Geopark Visitors' Centre is located in Duus museum, Reykjanesbær. It serves as a regional tourist information where travellers can get general information about Reykjanes Peninsula, Iceland and general information on travelling in Iceland. The Visitors' Centre has an exhibition on the geology of the Reykjanes peninsula and its unique geology. It's a great place to get information about what you are seeing and experiencing when travelling in Reykjanes.

-  Duusgata 2-8, 230 Reykjanesbær
-  Summer: Open weekdays 9:00-17:00, weekends 12:00-17:00  
Winter: Open every day 12:00-17:00
-  Access

## 3. REYKJANES LOCAL HISTORY MUSEUM

The Reykjanesbær Local History Museum presents exhibitions that address the region's history. Our main exhibition covers the local history from the settlement in the early 9th century to the mid-20th century. The focus is on the development of seaside villages in the 19th and early 20th century where the area's bounteous fishing grounds played the biggest role.

-  Duusgata 2-8, 230 Reykjanesbær

## 4. REYKJANES ART MUSEUM

The Reykjanes Art Museum, opened in 2003, offers a superb view of Keflavik's picturesque marina.

New art exhibitions open every six weeks. In recent years, the art exhibitions at the Reykjanes Art Museum have been considered among the best in Iceland regarding quality and variety. The Art Museum is located in the Duus Cultural Centre.

-  Duusgata 2-8, 230 Reykjanesbær

 [listasafn.reykjanesbaer.is](http://listasafn.reykjanesbaer.is)

### 5. THE REYKJANES MARITIME CENTER

The Reykjanes Maritime Centre is home to a collection of over 100 model boats built by retired local skipper Grímur Karlsson. Handcrafted to a high degree of perfection and painstaking detail, they offer insight into Iceland's maritime history, beginning with the masted schooners of the mid-to-late 19th century, and ending with the steam and diesel-powered trawlers of the 20th century.

-  Duusgata 2-8, 230 Reykjanesbær
-  See Duus Museum opening hours

-  [duushus@reykjanesbaer.is](mailto:duushus@reykjanesbaer.is)
-  [duusmuseum.is](http://duusmuseum.is)

### 6. GIGANTA

Giganta the giantess, who lives in the Black Cave at the marina in Gróf was originally the creation of author Herdís Egilsdóttir who wrote stories about a little girl named Sigga and her friend Giganta. The design and creation of the cave and its occupants was carried out by Norðanbál Art Group. Giganta is a full-sized, friendly giantess and sleeps in a rocking chair in her kitchen at Black Cave.

-  [skessan.is](http://skessan.is)

### 7. THE ICELANDIC MUSEUM OF ROCK'N'ROLL

The Icelandic Museum of Rock and Roll is a modern museum about the history of pop and rock music in Iceland.

Come and experience the history of music in Iceland from the early 1800's to Björk, Sigur Rós and Of Monsters and Men.

-  Hjallavegur 2, 260 Reykjanesbær
-  Open 11:00-18:00
-  Access

-  [info@rokksafn.is](mailto:info@rokksafn.is)
-  [rokksafn.is](http://rokksafn.is)

### 8. THE HERITAGE AND MARITIME MUSEUM AT GARÐSKAGI

Located in the natural paradise of Garðskagi, where the beauty of the landscape and the rich animal and bird life blend together. The museum is both folk and maritime museum and has an outstanding collection of machines and items that were essential for survival in Iceland in times past. Included in the museum fee is a visit to the big lighthouse which houses a captivating Northern Lights show, a Whale show and has a magnificent view from the top.

-  [gardskagi.com](http://gardskagi.com)

### 9. KVIKAN

Located only a few minutes from the Blue Lagoon, Kvikán houses three unique exhibitions; the Saltfish Museum, the Earth Energy exhibitions and Guðbergsstofa. The tourist information centre in Grindavík is located in Kvikán.

-  Hafnargata 12a, 240 Grindavík
-  Daily from May 15 – August. 15, 10:00 - 17:00. Open for groups upon request
-  Access
-  +354 420 1190/+354 420 1100
-  kvikan@grindavik.is
-  visitgrindavik.is/kvikan

### 10. THE SALT FISH MUSEUM

An intriguing exhibition that brings to light Iceland's seafaring history. The people of Grindavík have long been among the most prolific in the production of dried salted cod. An exhibition about Iceland's history in the processing and sales of dried salted cod and its significance to Iceland's economy is therefore well placed in Grindavík.

-  Hafnargata 12a, 240 Grindavík
-  Daily from May 15 – August. 15, 10:00 - 17:00. Open for groups upon request
-  Access
-  +354 420 1190/+354 420 1100
-  kvikan@grindavik.is
-  visitgrindavik.is/kvikan

### 11. EARTH ENERGY

A lively exhibition about geology, geothermal heat and the harnessing of energy from the bowels of the earth. You will learn about Iceland's unique, dynamic processes, such as volcanism and the harnessing of geothermal energy. The exhibition is brought to life with stunning video clips of volcanic eruptions and geothermal activity from around the country.

-  Hafnargata 12a, 240 Grindavík
-  Daily from May 15 – August. 15, 10:00 - 17:00. Open for groups upon request
-  Access
-  +354 420 1190/+354 420 1100
-  kvikan@grindavik.is
-  visitgrindavik.is/kvikan

### 12. GUÐBERGSSTOFA

A collection and exhibition honouring Guðbergur Bergsson, author and honorary citizen of Grindavík, and one of Iceland's most distinguished writers, past and present. Guðbergur was born in Grindavík in 1932 and grew up in the village.

-  Hafnargata 12a, 240 Grindavík
-  Daily from May 15 – August. 15, 10:00 - 17:00. Open for groups upon request
-  Access
-  +354 420 1190/+354 420 1100
-  kvikan@grindavik.is
-  visitgrindavik.is/kvikan

### 13. VIKING WORLD

Viking World is the home of the Viking ship Íslendingur (The Icelander). Built in 1996, The Icelander is an exact replica of the famous Gokstad ship, a remarkable archaeological find of an almost completely intact Viking ship, excavated in Norway in 1882. Viking World offers 4 different exhibitions; Vikings of the North Atlantic, the Settlement of Iceland, Fate of the Gods and the Iceland Saga Trails.

-  Víkingabraut 1, 260 Reykjanesbær
-  Every day 7:00 - 18:00
-  Access
-  +354 422 2000
-  [info@vikingworld.is](mailto:info@vikingworld.is)
-  [vikingworld.is](http://vikingworld.is)

### 14. SETTLEMENT ZOO

The Settlement Zoo is situated near Viking World and is open during summer, providing children with a chance to see lambs, goats, ducks, calves, rabbits and hens. Admission is free. Located just across from Viking World.

-  By the Viking World, 260 Reykjanesbær
-  Open: 1 May-1 August  
Daily 11.00-17.00
-  Access
-  +354 421 6700
-  [reykjanesbaer.is](http://reykjanesbaer.is)

### 15. STEKKJARKOT

A classic example of a roughly built turf, stone and timber fisherman's cottage. Stekkjarkot opened to the public in 1993, following a year of restoration. It provides insight into what cottages of this type looked like in past times.

-  Innri Njarðvík, Víkingabraut 1, 260 Reykjanesbær
-  Opening hours by request
-  No Access
-  +354 865 6160

### 2. GEOCAMP ICELAND

GeoCamp organises and receives international study groups focusing primarily on geology, geography, natural sciences and renewable energy. Our location on the Reykjanes Peninsula in Iceland offers education and site visits to numerous geothermal areas, unspoiled geological sites of interest and vast lava fields. This is the perfect place for your study visit.

### 3. GARÐSKAGI

Garðskagi has much to offer visitors with its two lighthouses, restaurant, museum, beautiful beach and often stunning sunsets. It's an optimum location for Northern Lights spotting and to learn about them from our Northern Lights show. The new lighthouse is the tallest in Iceland with magnificent views and houses a Northern Lights show and a Whale show. Garðskagi is a premium bird-watching location and whales can often be observed along the coast.

## GOLF COURSES OF REYKJANES

The **Sudurnes Golf Course** is one of the links golf courses in Iceland placed by the seaside on the Reykjanes Peninsula less than 10 min. drive from Keflavik International Airport. The signature par 3 hole Bergvik is the most famous golf hole in Iceland whereas the ball has to fly from the back tee nearly 200 yards over the sea to land on the green.

📍 Hólmsvöllur, 250 Garður.  
☎ + 354 421 4100

The **Grindavik Golf Course** is located by the highway to Reykjanesviti, west of Grindavík, about 7 km from the Blue Lagoon. The course is 18 holes, five of which are by the sea, thirteen are north of the highway and stretch into the lava.

📍 Húsatóftavöllur, 240 Grindavík.  
☎ + 354 426 8720

The **Sandgerdi Golf Course** is a 18 hole links course located between Sandgerdi and Gardur (Sudurnesjabaer). Only about 10 minutes from Keflavik International Airport.

📍 Vallarhús, 245 Sandgerði.  
☎ + 354 423 7802

The **Vogar Golf Course** is a 9 hole course alongside an iconic church located between the Keflavik International Airport and the capital Reykjavik.

📍 Kálfatjörn, 190 Vogar.  
☎ + 354 424 6529

### SWIMMING POOLS IN REYKJANES

Almost every town in Iceland has a swimming pool. Relax in one of Reykjanes' outdoor pools with geothermally heated water, hot tubs and sometimes a sauna. Children will love the slides and kiddie pools. Open year round.

## HOW TO GET TO & AROUND REYKJANES PENINSULA

Reykjanes Peninsula is very accessible all year round. Conveniently located close to the capital Reykjavík, distances between major sites and services are short. Many major airlines offer weekly and daily flights to Iceland via Keflavik International Airport, allowing you to start your adventure as soon as you arrive. Explore the peninsula by local transport or hire a local tour operator to show you all of our secret spots (see tour operators in the Activities section of this book).

### By air: Multiple airlines fly to and from Iceland

### KEFLAVIK INTERNATIONAL AIRPORT

Keflavik International Airport is the primary gateway to Iceland. It has been awarded for service excellence numerous times and was voted best European airport in 2010, and for quality service in 2014. Its most recent award in 2016 was for best airport in Europe serving under 5 million passengers. The airport features comfortable and modern passenger and commercial facilities with extensive capacity on the North Atlantic and polar routes linking Europe and Asia with North America.
